

The digital forensic examiners at Maryman provide investigative and litigation support services for matters such as hacking, malware, and breaches, incidents involving phishing and ransomware, fraud, intellectual property theft, employee terminations, and family law. The highly skilled team is comprised of seasoned professionals possessing broad technical and investigative skillsets with varied backgrounds including federal law enforcement and intelligence services, industry, and academia.

The Los Angeles headquartered team provides a full spectrum of digital forensic services including acquisition, analysis, cyber investigations, expert witness testimony, and incident response solutions. At the forefront of technology and computer forensics, the team led by former FBI Special Agent Brad Maryman expertly analyzes computers, mobile devices, servers, and virtualized systems along with specialized acquisitions of non-standard and embedded hardware.
